**Banks and financial establishments role in financing  
small and medium projects.**

" Spotlights on Jordan and Algeria's experiments "

small and medium projects occupy an important and a great portion in the economic activity in both Jordan and Algeria .these projects participate in holding a high rate in labor force size , lessing the unemployment size , and achieving the balance between regions and governorates in both Jordan and Algeria , because of their wide spreading , limitation of their financing and their dependence and individual savings

specialized banks and financial establishments play a great and important role in financing and developing there projects , because of that , it is required from the banks and financial establishments to offer facilities and easy loans to minimize the required banking guarantees .
